ATF RECOMMENDATIONS GUIDE

AUTOMATIC TRANSMISSIONS ONLY—PASSENGER CARS & LIGHT TRUCKS

The following table lists the vehicles and different types of fluids for which VersaTrans® LV ATF, VersaTrans ATF and CVT Fluid may or may not be used. VersaTrans LV ATF is recommended for most 2006 and newer vehicles that require a low-viscosity fluid, as well as many older vehicles. VersaTrans ATF is recommended for older (mostly pre-2006) vehicles designed for a higher viscosity fluid. CVT Fluid is designed for use in belt-type continuously variable transmissions (CVTs) and in select chain-driven CVTs equipped with a torque converter. OEM fluids and part numbers can be found in the Chek-Chart Lubrication Guides published by MOTOR Information Systems. Multiple listings are specific to certain models and model years and are NOT interchangeable. Please consult your owner's guide to verify the proper fluid recommendation for your vehicle.

AUTOMAKER	ATF TYPE	MODELS	MODEL YEARS	OK TO USE WHERE THESE FLUIDS ARE SPECIFIED	DO NOT USE WHERE THESE FLUIDS ARE SPECIFIED

VersaTrans® ATF has carefully balanced frictional properties for smooth shifting and excellent anti-shudder performance. It has high shear stability and excellent oxidation resistance for long service life. It provides excellent wear protection, helps protect against sludge and varnish formation, and has excellent low-temperature properties for easier shifting in cold weather. The part-synthetic formulation provides enhanced performance benefits at extreme temperatures compared with conventional, all-mineral transmission fluids.

VersaTrans LV ATF is specifically engineered to help ensure long service life and to provide consistent shift performance for the life of the fluid, as well as better shift performance under extreme operating conditions. It is highly shear stable and has excellent oxidation resistance for long fluid life. It provides excellent anti-shudder performance and has excellent low-temperature properties for easier shifting in cold weather. The low-viscosity fluid results in less frictional drag (churning loss) for improved transmission efficiency, thereby offering the potential for improved fuel economy performance.

CVT Fluid has carefully balanced frictional properties to protect against belt slippage and wear while also providing excellent anti-shudder performance. It has high shear stability and excellent oxidation resistance for long service life. It helps protect against sludge and varnish formation, and has excellent low-temperature properties for easier shifting in cold weather. The synthetic formulation provides enhanced performance benefits at extreme temperatures compared with conventional, all-mineral transmission fluids.
